	Each year thereafter for your cat's lifetime, it will need <b>yearly</b> boosters on its <b>vaccinations</b> , as well as a <b>yearly deworming</b> .	<b>Walk ins for vaccinations are always welcome. Spay and Neuter Surgeries are done daily by appointment.</b>

**The Kitten Vaccination (FVR)**, also known as distemper vaccination, is one injection that protects your cat against the very common and serious diseases, viral rhinotracheitis, calicivirus, and panleukopenia. As shown in the above recommended schedule, kittens need to receive this injection twice, once at 8 weeks of age and once at about 12 weeks of age. Thereafter, an annual booster is needed each and every year to maintain protection.

**The Feline Leukemia Virus Vaccination (FeLV)** is an injection that protects your cat against the incurable and fatal disease, feline leukemia. As shown in the above recommended schedule, kittens need to receive this injection twice, once at about 12 weeks and once at about 16 weeks. A booster is needed every other year thereafter to maintain protection. We recommend testing your kitten for feline leukemia prior to vaccination.

**The Rabies Vaccination** is an injection that protects your cat against the fatal disease rabies. This vaccination is required by law as humans can contract rabies. Your cat will need an initial injection at 12 weeks, a **booster one year from the initial**, and thereafter every other year for his or her life.
